

# InfiniiVision Series Oscilloscope Secure Environment Mode Option

## Data Sheet

### Protect your scope data and settings

The secure environment mode option for InfiniiVision 5000, 6000 and 7000 Series oscilloscopes provides the highest level of security by ensuring that internal memory is clear of all setup and trace settings in compliance with National Industrial Security Program Operating Manual (NISPOM) Chapter 8 Information System Security requirements.

When secure environment mode is installed, trace and setup data are stored to internal volatile memory (rather than internal non-volatile memory). Oscilloscope trace and setup data are erased when the power is shut off. This ensures that any trace and setup data will not be visible to the next user upon power-up. The clock, LAN, and GPIB settings are not discarded upon power-down.

To permanently store data, you can save it to an external USB memory device through the oscilloscope's front panel USB port.

*Once installed, secure environment mode cannot be disabled.* Secure environment mode is available beginning with system software version 3.50. As a precaution against attempting to defeat secure environment mode, this option prevents older software from being installed.

When installed, the secure environment mode license will appear as SEC in the Installed Licenses line of the "About Oscilloscope" display. To access the About Oscilloscope display, press the **Utility** key, then press the **Service** softkey, then press the **About Oscilloscope** softkey.

For more information, visit [www.agilent.com/find/security](http://www.agilent.com/find/security).

Figure 1. When secure environment mode is installed, trace and setup data are stored to internal volatile memory.

Figure 2. To permanently store data, you can save it to an external USB memory device through the oscilloscope's front panel USB port.

## Ordering information

To order secure environment mode as a factory-installed product option when you order a new 5000, 6000 or 7000 Series oscilloscope, add “-SEC” to the scope model number.

If you want to add secure environment mode to an InfiniiVision 5000, 6000 Series oscilloscope you already own, order model N5427A. The option can be self installed, or you can return your oscilloscope to an Agilent service center for installation.

Agilent model number	Description	Series
Option SEC	Secure environment mode option for InfiniiVision Series oscilloscopes (factory installed option at time of initial scope purchase)	5000 6000 7000
N5427A	Secure environment mode option for 5000, 6000 and 7000 Series oscilloscopes (service-center-installed or self-installed on previously purchased InfiniiVision Series scopes) *Plus license installation cost	

NOTE: The SEC option works best with new instruments and previously purchased instruments that have not previously stored “confidential” trace or setup data to a non-volatile memory.

If you have a InfiniiVision Series scope that has been purchased without SEC and you have saved “confidential” trace or setup data to memory to ensure a secure environment, you should remove and destroy the oscilloscope’s acquisition board before installing the N5427A. After purchasing and installing a new acquisition board, install the N5427A.

**Remove all doubt**

Our repair and calibration services will get your equipment back to you, performing like new, when promised. You will get full value out of your Agilent equipment throughout its lifetime. Your equipment will be serviced by Agilent-trained technicians using the latest factory calibration procedures, automated repair diagnostics and genuine parts. You will always have the utmost confidence in your measurements.

Agilent offers a wide range of additional expert test and measurement services for your equipment, including initial start-up assistance, onsite education and training, as well as design, system integration, and project management.
